# UNLEASH THE POWER OF LIMITLESS CONNECTIVITY

2021 Fall  
Technical Forum  
SCTE • NCTA • CABLELABS

**Wireless Access Network**

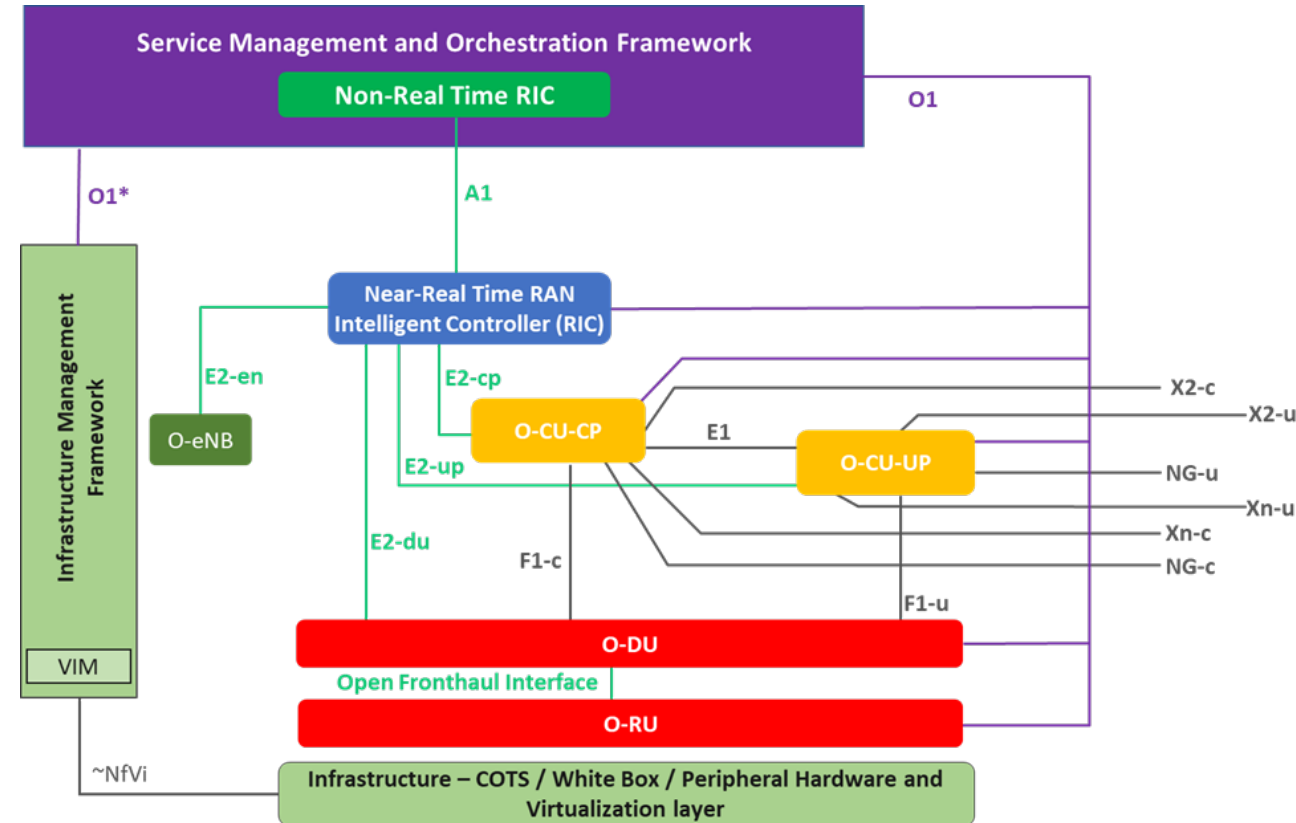

# ORAN, the future of wireless architectures

**Bill Beesley**

Principal Solutions Architect  
Fujitsu

# What is O-RAN

- Conflation of O-RAN and OpenRAN
  - O-RAN – O-RAN Alliance
    - Industry consortium founded Feb 2018
    - AT&T, China Mobile, Deutsche Telekom, NTT DOCOMO and Orange
  - OpenRAN – Telecom Infrastructure Project working group
- Standardized interface definitions allow for mixed vendor deployments
- Can still be single vendor implementations

# Arguments against ORAN

- Supply chain simplicity
  - One throat to choke
  - Simplifies training and warehousing
- Operator becomes system integrator
  - Interop must be resolved at design and anytime a component is updated

**Many US Operators are in  
“wait and see” mode**

- Mitigate supply chain disruptions
  - Natural Disasters
  - Pandemics
  - Industrial accidents
- Limited to suppliers roadmap and vision
  - Constrains ability to introduce new functionality
- No vendor can be the best at everything
  - ORAN allows for selection of best of breed

**Diversity lowers risk  
and increases  
flexibility**

- Balance effort vs Risk
  - Decide on which integration task to take on
- TIP OpenRAN exchange
- Ecosystem of experience ORAN integrators exists and is growing

- Obscurity is not security
- Open systems have security advantages
  - Issues identified and resolved more quickly
  - Large community of developers can outpace a small in-house team

**Open systems allow operators to deploy fixes themselves if they wish**

- Modern telecom networks are evolving at a quicker pace
  - Increased demand for bandwidth and lower latency
  - New technology requirements
    - IoT
    - Industry 4.0
    - Gaming
    - AI/ML
    - Autonomous vehicles
- 5G use cases will require orders of magnitude more radios deployed

**Networks must become more adaptable and agile**

**Open best supports this**

- Past open systems have increased innovation
  - IBM PC
  - DOCSIS
- Flexible networks can adapt more quickly to customer demand
- SCTE GAP will also help speed innovation and lower costs
  - Support for multi-service edge
    - Enterprise 5G
    - IoT
    - Smart cities
    - Edge gaming

**Open networks can  
deliver the next  
generation network  
vision**

- Operator isn't forced to be system integrator
- Growing ecosystem of suppliers increases choice
  - Operator can still elect to deploy single vendor O-RAN architecture
- Open allows operator to define network vision not vendor

**O-RAN supports agile  
and programmable  
network of the future**
